

LEO Edge Architecture - One Page Summary

System Block Diagram

LEO Edge Architecture - System Block Diagram

Regime map: best architecture by rate/contact

Key Metrics (median across sweep)

Architecture	TFUP (s)	TCP (s)	Process Energy (J)	Tx Energy (J)	Total Energy (J)
A0_GROUND_ONLY	120.0	120.0	0	7500	7500
A1_COMPRESSED_FULL	92.0	92.0	300	4200	4500
A2_QUICKLOOK_FIRST	13.2	124.4	30	1420	1450
A3_ROI_FIRST	52.0	152.0	300	3100	3400
A4_PROGRESSIVE	20.0	147.6	300	2167	2467

Notes: TFUP = time to first useful product; TCP = time to complete product.
Medians are computed only over completed deliveries within a single contact window (see results/frozen/v2); an architecture with no completed deliveries in the sweep shows as NaN. System diagram and regime map are from fig01 and fig04.
